Process for the preparation of (metal) salts of  
alkylphosphonous acids II

Abstract

The invention relates to a process for the preparation of (metal) salts of alkylphosphonous acids, which comprises reacting elemental yellow phosphorus with alkyl halides in the presence of carbonates, bicarbonates, amides, alkoxides, amine bases and/or solid hydroxides as bases.

The invention also relates to the use of the (metal) salts of alkylphosphonous acids prepared by this process.
